

BARRIER

Abstract of the Disclosure

A portable barrier panel for providing privacy to a screened area comprises a plurality of vertical support tubes. The portable barrier panel further comprises a plurality of elongate legs having an adjustable length. The elongate legs are attached to a lower portion of the vertical support tubes, such that an angle α exists between the elongate leg and the vertical support tube axis. The angle α is adjustable. The portable barrier panel further comprises an elongate horizontal framing member having first and second ends that are supported by two different vertical support tubes. The portable barrier panel further comprises an opaque curtain mounted to the horizontal framing member and at least one of the vertical support tubes.
